	Plumpy'Nut® is a RUTF designed for the outpatient treatment of uncomplicated SAM in individuals 6 months of age and older. Plumpy'Nut® is nutritionally equivalent to F-100 therapeutic milk. Treatment should be provided based on international and country guidelines.	RUTF Therapeutic Feeding	Treatment of severe acute malnutrition (SAM)	6 months and older	92g sachet (500 kcal)	150 sachets	100- 135 kcal/kg/day until recuperated (~2 months)
	Plumpy'Sup™ is a RUSF designed to treat MAM in individuals 6 months of age and older.	RUSF Supplementary Feeding	Treatment of moderate acute malnutrition (MAM)	6 months and older	100g sachet (550 kcal)	150 sachets	1 sachet/ day until recuperated (~2 months)
	Plumpy'Doz™ is a LNS-MQ designed for children 6 months of age and older at risk of acute malnutrition. It provides essential vitamins and minerals, along with additional calories and protein to help prevent illness and malnutrition and mitigate severe food insecurity. It is intended to be given to young children who are at a higher risk of becoming undernourished due to inadequate diet.	LNS-MQ Medium Quantity Supplement	Prevention of acute malnutrition in children	6 months and older	50g sachet (270 kcal)	300 sachets	1 sachet/ day for ~6 months
	Nutri'School® is a LNS-SF designed to be a source of energy, protein, and essential vitamins and minerals that are often lacking in the diet of school age children. It can be used as a midmorning snack to help alleviate hunger, especially in schools that are not able to serve hot meals. It is ready to eat directly from the packet or can be eaten with other foods. Nutri'School® is suitable for children over 3 years of age.	LNS-SF (School Feeding) Medium Quantity Supplement	Supplementation for school feeding programs. For children at risk of hunger and micronutrient deficiencies	3 years and older	50g sachet (275 kcal)	300 sachets	1 sachet/ day
	Enov'Nutributter® is a LNS-SQ intended for young children (6 to 24 months old). It contains vitamins, minerals, and other important nutrients to promote growth, motor development, and aid in the prevention of illness and malnutrition in young children. Enov'Nutributter® is typically used in blanket feeding programs in food insecure settings where high levels of stunting is a concern.	LNS-SQ Small Quantity Supplement	Prevention of chronic malnutrition and micronutrient deficiencies in children	6- 24 months	20g sachet (110 kcal)	600 sachets	1 sachet/ day for at least 6 months
	Enov'Mum™ is a LNS-SQ designed for pregnant and lactating women. It contains vitamins, minerals, and other important nutrients to improve the nutritional quality of a woman's diet during pregnancy and lactation. Enov'Mum enables pregnant or lactating women to reach their recommended daily nutrient intake of multiple micronutrients and essential fatty acids, with the aim of having a positive effect on maternal status, birth outcomes, and postnatal growth.	LNS-PLW (Pregnant and Lactating Women) Small Quantity Supplement	Promotes a healthy pregnancy and prevents malnutrition in pregnant and lactating women	Pregnant and lactating women	20g sachet (120 kcal)	600 sachets	1 sachet/ day for ~15 months (pregnancy and lactation)
